2 Point the camera at this marker

Lay the sheet flat in good light. Keep the whole black square in view, 30-50 cm away.

bench extends ->

- Print at 100% (no "fit to page") so the marker stays square. Do not cut into the white border around the black square.
- Leave some free table space on the right of the marker: the virtual GM tube moves there as you increase the distance.
- All sources, rates and doses are simulated for training. No radioactive material is involved.
